

DANIYAL HAYAT

FULL-STACK DEVELOPER & SOFTWARE SYSTEMS ENGINEER

Email: mdaniyalhayyat@gmail.com • GitHub: github.com/DotDaniyal • Portfolio: daniyal-hayat-portfolio.vercel.app • Remote / Global

EXECUTIVE SUMMARY

Full-Stack Developer and Native Android Engineer specializing in architecting modern, high-throughput web applications (React 19, Next.js, TypeScript), cross-platform mobile solutions in Kotlin, and intelligent generative AI systems with Google AI Studio and Gemini models. Dedicated to clean modular architecture, zero-bloat performance, accessible UX craft, and resilient offline capabilities.

TECHNICAL CORE PROFICIENCIES

- **Languages & Runtimes:** TypeScript, JavaScript (ES6+), Kotlin, Node.js, SQL, HTML5, CSS3
- **Frontend & UI Craft:** React 19, Next.js, Tailwind CSS v4, Motion (Framer), Vite, Responsive Design, Design Systems
- **Mobile & Storage:** Native Android SDK, Room/SQLite, Offline Caching, RESTful APIs, JSON Data Handling
- **AI Engineering & Cloud:** Google AI Studio, Google Gemini SDK (@google/genai), Prompt Architecture, Multimodal Grounding, Vercel
- **Tooling & DevOps:** Git, GitHub, Linux/Bash, Figma, Lighthouse Optimization, PWA Standards, Type-Safe Architecture

SELECTED PRODUCTION PROJECTS & OPEN SOURCE

Official Darul Ifta Irshad us Saileen & Islamic AI | Lead Architect & Full-Stack Developer

Stack: JavaScript, Tailwind CSS, Kotlin, REST APIs, Google Gemini AI [Live | GitHub]

- Architected high-throughput responsive web platform and native Android mobile apps serving community religious consultation and theological guidance.
- Engineered offline-first local caching in Kotlin to ensure uninterrupted, reliable guidance access in remote, low-connectivity environments.
- Integrated Google Gemini AI intelligence pipeline for cited theological research grounded in authoritative archives.

CortexIQ AI Suite & AI Prompt Studio | Creator & Full-Stack Engineer

Stack: TypeScript, React 19, Google Gemini SDK, Node.js, Express, Vite, Motion [Live | GitHub]

- Built full-stack computational intelligence dashboard pairing natural language queries with real-time reactive telemetry and token streaming.
- Implemented secure server-side Node.js proxy routes to isolate sensitive model credentials from client-side runtime environments.
- Achieved sub-100ms UI responsiveness while rendering live asynchronous token streams and analytical metrics.

Hamara Weather — Real-Time Meteorological Tracking | Frontend Engineer

Stack: JavaScript (ES6+), OpenWeather API, Modern Flex/Grid, Vercel [Live | GitHub]

- Developed ad-free live atmospheric conditions tracking dashboard with precision humidity, wind speed, and meteorological telemetry.
- Designed lightweight asynchronous pipeline with defensive error handling for edge cases and location network interruptions.

Mystic Match — Algorithmic Mobile & Web Puzzle Game | Game & Mobile Engineer

Stack: Kotlin, Android Canvas, 2D Matrix Algorithms, State Machines [Live | GitHub]

- Engineered bespoke match-3 algorithmic engine in Kotlin with cascading matrix replenishment and fluid touch ergonomics.
- Implemented deterministic state machines to eliminate infinite cascade loops and memory leaks on mobile viewports.

Faryal FC Digital Headquarters & DNYL Eyewear Showcase | Product & UI/UX Developer

Stack: React, TypeScript, Tailwind CSS, Motion, Responsive Design [Live | GitHub]

- Crafted modern athletic sports platform with interactive rosters, matchday fixture schedules, and responsive fan drawer.
- Created luxury digital boutique showroom featuring 60 FPS motion transitions, fluid typography, and sub-second asset rendering.

EXPERIENCE & ENGINEERING MILESTONES

Full-Stack Web & Native Android Developer — Independent Software Engineer & Product Builder (2025 — Present)

Architecting end-to-end production web platforms and native mobile apps with strict emphasis on performance, type safety, accessibility, and modern UI craft.

Mobile Application Developer — Native Android & Algorithmic Systems Focus (2024 — 2025)

Mastered Kotlin Android architecture, Room database, offline synchronization routines, and touch-optimized canvas engines.

Frontend Developer — Modern Web Engineering & React Foundations (2023 — 2024)

Built responsive web platforms, async REST API integrations, and component-driven design systems with strict Git version control.

EDUCATION & CONTINUOUS SPECIALIZATION

- **Core Computer Science, Algorithms & Software Architecture** — Continuous Academic & Applied Engineering Studies
Data Structures, Algorithm Complexity, OOP in Kotlin/TypeScript, System Design, and Caching.
- **Google AI Studio & Gemini API SDK Specialization** — Advanced AI Systems & Applied Verification (Google Developers & DeepMind)
System instructions, structured JSON schemas, multimodal prompting, function calling, and server-side SDK proxying.
